**Message from the Editor-in-Chief**

Until recently, the field of nephrology was unable to keep pace with oncology, cardiology, and rheumatology in the development of new treatment options and their testing in ever-increasing numbers of randomized controlled trials. However, in recent years, we have been witnessing dramatically increased interest in the treatment of chronic kidney diseases such as diabetic kidney disease, glomerular disease, and autosomal dominant polycystic kidney disease, and also more generally their progression and associated complications, such as anemia and hyperkalemia. This progress has led to changing paradigms, as reflected by several recently published KDIGO guidelines, which now need to be updated much more frequently than before. To personalize treatment, we also require better diagnostic methods, including validated biomarkers that can reflect disease activity (including response to treatment) and contribute to predicting outcomes.

**Aims:**

*Kidney and Dialysis* (ISSN 2673-8236) is an open access, peer reviewed journal devoted to publishing articles on all aspects of the kidney. It focuses on normal kidney function and kidney disease, the preservation of kidney health and the treatment of kidney disease, from diet and medication to renal replacement therapy (dialysis and kidney transplantation). It also publishes research related to systemic conditions that affect the kidneys, such as diabetes and autoimmune disease, and systemic diseases that occur as a result of kidney disease, such as renal osteodystrophy and hypertension. Papers reporting new diagnosis methods and technologies for kidney function and disease will be welcome as well.

**Scope:**

- Biomarkers in kidney disease;
- Chronic kidney disease (CKD), complications and nutrition;
- Acute kidney injury (AKI)/critical care;
- Diabetic kidney disease;
- Glomerulonephritis;
- Pregnancy and CKD;
- Hypertension and nephrology;
- ADPKD;
- Renal vasculitis;
- Lupus nephritis;
- Hereditary kidney disease;
- Renal ischemia;
- Dialysis, hemodialysis (HD), peritoneal dialysis (PD);

- Dietary management and medication;
- Kidney transplantation;
- New diagnosis methods and technologies for kidney function and disease.
